

nuCORE

Eight Technologies.
One Intelligent Laser Platform.

BY WORLD AESTHETIX

The Smarter Way to Build a Laser Practice.

Most clinics don't fail because of demand.
They fail because of complexity.

Traditional laser expansion requires buying multiple machines, multiple trainings, multiple service contracts, and multiple ongoing costs. Each addition increases overhead and slows profitability.

nuCORE was designed to eliminate that friction.

It is a single, modular laser platform built to grow with your practice, without forcing you to reinvest every time you expand your service menu.

What is nuCORE?

nuCORE is an **8-in-1 multifunctional laser platform** that integrates the most in-demand aesthetic laser technologies into one unified system.

Instead of purchasing separate devices nuCORE consolidates them into a single intelligent core with interchangeable applicators.

One platform. **One** footprint. **One** training pathway.

Eight revenue streams.

Industry leading 2-year warranty included. Extendable up to 5 years.

Applicators

1. 2940nm Er:YAG Fractional
(ablative resurfacing)

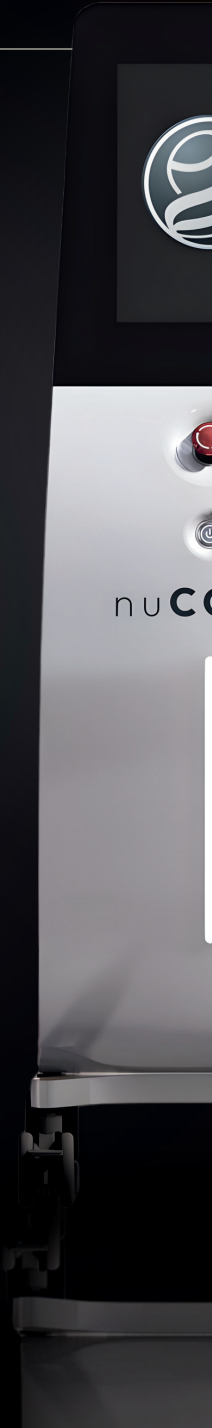

2. 1540nm Er:Glass Fractional
(non-ablative resurfacing)

3. Picosecond
(pigment & tattoo correction)

4. Q-Switched Nd:YAG
(tattoos & lesions)

5. 1064nm Long Pulse Nd:YAG
(vascular treatments)

6. IPL with 6 filters
(photorejuvenation & acne)

7. 755 / 808 / 1064nm Diode
(multi-wavelength hair reduction)

8. 808nm Diode
(fast, painless hair reduction)

1. 2940nm Er:YAG Fractional

Ablative + Fractional Skin Resurfacing

Skin Resurfacing & Rejuvenation

- Fine to moderate wrinkles
- Upper and lower eyelid tightening
- Crow's feet
- Smoker's lines
- Skin laxity
- Photoaging
- Rough skin texture
- Acne scars, surgical scars, traumatic scars

Highly effective for stimulating collagen to improve skin laxity and texture.

2. 1540nm Er:Glass Fractional

Non-Ablative Fractional Skin Remodeling

Skin Tightening & Rejuvenation

- Mild to moderate skin laxity
- Early aging changes
- Skin firmness improvement
- Texture refinement
- Scars
- Striae (Stretch Marks)
- Fine Lines/Wrinkles

Designed to stimulate collagen remodeling, improving skin laxity, texture, and tone with minimal downtime.

3. Picosecond Laser

Tattoo & Pigment Correction

(Picosecond pulse duration – photoacoustic dominant)

Tattoo Removal (Gold Standard)

- Black, blue, green, teal, purple
- Resistant & multi-colored tattoos
- Faster clearance, fewer sessions

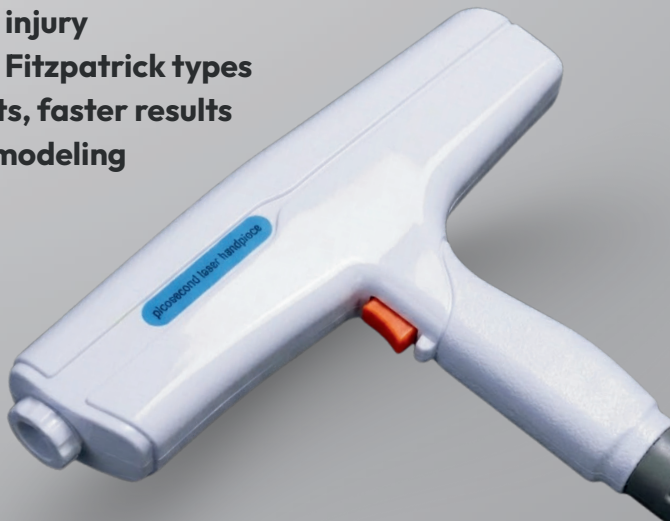

Benign Pigmented Lesions

- Lentigines
- Freckles
- Skin Rejuvenation-Carbon Facial for Brightening & Tightening

Melasma

- Epidermal & mixed types (with training)

- ✓ **Superior pigment shattering**
- ✓ **Minimal thermal injury**
- ✓ **Safer for darker Fitzpatrick types**
- ✓ **Fewer treatments, faster results**
- ✓ **True collagen remodeling**

4. Q-Switched Nd:YAG

Tattoo & Pigment Correction

(Nanosecond pulse duration – photomechanical + photothermal)

Pigmented Lesions on all skin types

- Solar lentigines
- Freckles (ephelides)

Tattoo Removal

- Black & dark blue tattoos (1064 nm)
- Red, orange, yellow inks (532 nm)
- Professional & amateur tattoos

Melasma-Hormonal Pigmentation

- Epidermal & mixed melasma (with training)

High-energy pulses designed for effective tattoo removal and treatment of pigmented lesions.

5. 1064nm Long-Pulsed Nd:YAG

Vascular and Deep Dermal Targeting

Facial/Body Vessels

- Spider veins -Small, red (not blue)
- Facial telangiectasia
- Perinasal vessels
- Periorbital vessels
- Venous lakes (lip, ear)
- Cherry Angiomas
- Venous Malformations

Often paired with IPL for Superficial and Background Redness

6. IPL with 6 filters

Intense Pulse Light targets melanin to improve uneven pigmentation and sun damage. **Multiple spot sizes included.**

Pigment & Sun Damage

- Sun spots / age spots
- Freckles
- Uneven skin tone
- Photoaging pigmentation

Redness & Vascular Concerns

- Facial redness & rosacea
- Broken capillaries (telangiectasia)
- Diffuse erythema
- Poikiloderma (vascular component)

Acne & Inflammation

- Mild to moderate inflammatory acne
- Acne-related redness
- Sebaceous gland regulation

Photorejuvenation

- Improved skin clarity and tone
- Fine lines & texture refinement
- Enlarged pores

Hair Reduction

- Unwanted hair removal
- Pseudofolliculitis barbae
- Maintenance hair reduction

BEFORE

AFTER

BEFORE

AFTER

7. 755 / 808 / 1064nm Diode

8. 808nm Diode

Permanent reduction of unwanted terminal hair by targeting melanin in the hair follicle. **Multiple spot sizes included.**

Common indications

- Facial and body hair reduction
- Pseudofolliculitis barbae (razor bumps)
- Hirsutism (often combined with medical management)
- Gender-affirming facial and body hair reduction

Clinical notes

- Multiple sessions required (anagen-phase targeting)
- Safe, effective options for all skin types with multi-wavelength technology

Build Your nuCORE

Eight Technologies. Zero Consumables. One Intelligent Core.

Start lean with a single applicator or unlock the full platform with all eight technologies while keeping 100% of your treatment revenue.

Core Build

Start with 1 applicator & build as you grow.

Enhanced Value

Bundle 3 or more applicators and save.

Full Platform

Go all-in with all 8 & maximize profits.

Exact configurations are customized based on your market and patient demand.

No consumables. No per-shot fees.

- Predictable operating costs
- Faster break-even
- **You keep 100% of treatment revenue**

No licensing. No usage caps. No hidden fees.
